

PRESS RELEASE

22 July 2010

**environCom appoints new Chief Executive Officer
*New appointment will drive growth and expansion plans***

EnvironCom, the UK's leading waste electrical and electronic equipment (WEEE) recycler, has appointed Mr Sean Feeney as its new Chief Executive Officer.

Sean has 23 years experience in the retail and logistics sector first with Tesco Plc and latterly with DSGi Group Plc where he was Group Supply Chain Director, with responsibility for over 3,500 people across 11 countries. In this role he also implemented a market leading Environmental WEEE strategy across the group.

EnvironCom Chairman David Simpson said: "The appointment of Sean is a strong indication of the increasing professionalism that is driving the customer requirements throughout the waste recycling sector, and of the electrical and electronic waste recycling industry in particular.

"Sean has a breadth of experience in the field of operations and logistics and has been instrumental in the successful delivery of cost reductions and service delivery of some of the largest retailers in the UK. He also has a strong track record in the successful delivery of company strategic plans and financial performance.

Sean Feeney said, "I have been involved in the WEEE sector for over eight years now both abroad and in the UK and have watched Environcom grow and develop into the business it is today. I am therefore absolutely delighted and honoured to be joining Environcom at this very exciting stage in the development to lead the next stage of its growth."

The appointment of Mr Feeney follows the recent departure of Mr Joe Quigley as Chief Executive Officer due to personal reasons. "EnvironCom would like to thank Mr Quigley for his contribution over the last six years as the founder and entrepreneur in establishing the foundations of what will continue to be a very successful company. His entrepreneurial drive will be missed by all within the company." said Mr Simpson.

About environCom:

EnvironCom was established in 2003 by Joe Quigley. The company's main WEEE processing plant is based in Grantham in Lincolnshire and is one of the largest of its kind in Europe, capable of processing up to 100,000 tonnes of e-waste per annum.

EnvironCom's largest shareholder, Aloe Private Equity, is one of the world's leading socially and environmentally responsible investors. Aloe has a broad portfolio of investments covering clean energy, waste recycling and eco-processes and is committed to growing profitable asset based businesses.

EnvironCom's recycling services are used by Compliance Scheme members, businesses, local authorities and waste management companies. Its largest contract is with DSG International plc.

Where a product has the potential for re-use, it is fully tested before being placed back onto the market. All commodities such as metals, plastics and glass are traded on the global materials market.

All processes operated by the company are carefully recorded at each stage and records are provided to customers ensuring complete compliance with regulatory requirements and any specific customer requests. EnvironCom's software platform allows for full traceability and visibility of WEEE at each stage of the process and the management systems are accredited to Quality & Environmental Management Standards.
